

Title of posting

Discover the NANOMOTION World

as an Early Stage Researcher (PhD student) in an EU-wide program on

“Nanoelectromechanical Motion in Functional Materials (NANOMOTION)”!

We invite applications to the interdisciplinary Marie Curie Initial Training Network (ITN) NANOMOTION offering positions to 12 Early Stage Researchers (3 year PhD, ESR) and one Experienced Researcher (Post-Doc, 2 years). The individual project:

“Magnetolectric effect in core-shell multiferroic nanocomposites”

will be hosted at University of Duisburg-Essen (Germany), www.uni-due.de/materials, with secondments to the National Physical Laboratory (UK) and University of Aveiro (Portugal).

The ITN NANOMOTION is a highly interrelated network of groups throughout Europe tackling the challenges in nanomaterial property characterization using scanning probe techniques. Regular workshops and mutual visits make this program highly attractive for young researchers interested in becoming leading edge experts in various Scanning Probe Microscopy methods applied to functional materials.

Description:

The position is funded by the European Commission in the framework of the FP7 Marie Curie Initial Training Network “NANOMOTION”. NANOMOTION aims at the development of the next generation of multifunctional materials (piezoelectrics, ferroelectrics, multiferroics, ionic conductors and polar biomaterials) using novel nanoelectromechanical tools: Piezoresponse Force Microscopy (PFM) and Electrochemical Strain Microscopy (ESM) as well as their combination with traditional scanning probe microscopy methods. NANOMOTION is intended to train the next generation of scientists, engineers and technologists in the fundamental aspects of nanoelectromechanics and to apply advanced PFM/ESM tools to study a wide range of emergent multifunctional materials.

Specific project description: The magnetolectric effect (ME) in composites strongly depends on the properties of the interface and the type of the phase connectivity. The project will include fabrication of core-shell multiferroic nanocomposites using the sol-gel route and SPM investigation of the ME effect at the nanoscale. In these composites, where the magnetostrictive core is surrounded by the piezoelectric shell through well-defined interfaces, an enhanced ME response is expected. In the first stage of the project the ESR will be trained at University Duisburg-Essen (Germany) in the fabrication of the core-shell composites by a sol-gel method and in the macroscopic ME measurements. Then he/she will learn the SPM technique and perform local ME measurements at the partner institution. At a later stage of the project, the experimental data will be compared with the results of mathematical modelling of the ME response in composites performed at University Duisburg-Essen. Effect of different types of connectivity on the ME performance will be analyzed.

Nr. of job position: ESR7

Research Fields

Materials Science, Chemistry, Physics, Engineering

Career Stage

Early Stage Researcher (postgraduate)

Benefits

Employment as a PhD student with competitive salary is offered. The position entitles to participation in international conferences and NANOMOTION workshops. Local salary legislation applies (salary according to German TV-L E13, 100%).

University of Duisburg-Essen is an equal opportunity employer (received the „Total-E-Quality-Award“) putting strong emphasis on diversity management and cultural integration. Competences brought to the University by diversity of age or cultural background are highly honoured (<http://www.uni-due.de/diversity>). Applications of handicapped or equivalent are encouraged (compare legal § 2 Abs. 3 SGB IX). The University of Duisburg-Essen seeks to increase the number of female scientists and highly encourages applications. Women are given preference within the measures of the Landesgleichstellungsgesetz (Nordrhein-Westfalen, Germany).

Comment/website for additional job details

Please, send your application to this project (including motivation letter, CV, copy of University certificates, names of two referees all in **ONE** pdf or Word document using your name and number of position as filename) to (nanomotion.esr7@uni-due.de). Please use NANOMOTION application and number of position (ESR7) in the email subject line. Applications directly to the group members will not be accepted. Only use the given email address.

For further information and other job offers please visit: www.ITN-Nanomotion.eu.

Requirements

Degree: Master or equivalent (minimum 8 semester university studies)

Degree field: Materials Science/Physics/Chemistry/Engineering

Main research field: Materials Science/Physics/Chemistry/Engineering

Research subfield: Materials Science/Scanning Probe Microscopy

Years of Research Experience:

Required Research Experience: Physics/Chemistry/Engineering

Research Sub Field: Experience with material synthesis or with scanning probe techniques

Language English

Language level: Proficiency in spoken and written English

Further Requirements:

The candidate should have MSc or equivalent degree in Materials Science, Physics, Chemistry, or Engineering allowing to start a doctoral fellowship. Profound knowledge of English (both written and spoken) is required. The candidate should have initial experience either with materials synthesis or physical material characterization. EU imposes strict requirements on eligibility: At the time of recruitment the researcher must not have resided or carried out his/her main activity (work, studies, etc...) in the country of the beneficiary (Germany) for more than 12 months in the 3 years immediately prior to his/her recruitment under the project. He/she also should have less than 4 years of research experience. This is measured from the date they obtained the degree which formally entitles them to embark on a doctorate, either in the country in which the degree was obtained or in the country in which the research training was provided.

Timeline:

The position is opened from January 1st, 2012. Applications are considered on a continuous basis until a suitable candidate is identified.
